MOBILE ENERGY AUSTRALIA CONTACTS

Both the MEA Product Warranty Registration Form (located at the FRONT of this Manual) and the Kohler Engine Warranty Registration Form (located at the back of this manual) are to be returned to MEA.

FAILURE TO RETURN EITHER FORM MAY RESULT IN THE PRODUCT WARRANTY BEING VOID.

1. PRODUCT SAFETY

(COMPRESSOR / COMPRESSED AIR)

MEA DISCLAIMS ALL LIABILITIES FOR DAMAGE OR LOSS OF EQUIPMENT AND PROPERTY, PERSONAL INJURIES (INCLUDING DEATH), AND CONSEQUENTIAL DAMAGES ARISING OUT OF ANY MEA SYSTEM <u>NOT USED</u> IN ACCORDANCE WITH THE OPERATOR'S MANUAL.

ALL UNITS ARE SHIPPED WITH A DETAILED OPERATOR'S MANUAL. THIS MANUAL CONTAINS VITAL INFORMATION FOR THE SAFE USE AND EFFICIENT OPERATION OF THE UNIT. READ THE OPERATOR'S MANUAL BEFORE STARTING THE UNIT. FAILURE TO ADHERE TO THE INSTRUCTIONS COULD RESULT IN SERIOUS BODILY HARM OR PROPERTY DAMAGE.

Care is required when working with an air compressor or compressed air. Compressed air is one of the many ways energy can be stored. Releasing the stored energy in an uncontrolled manner can result in catastrophic consequences. Death and permanent disability are possibilities that can occur due to mis usage. The following are suggested as minimum precautions to be used when operating the SMARTPACK Air Compressor. It is important that each work site shall perform a risk analysis and produce a procedure to eliminate or control the hazardous condition to minimise the risk to personnel and equipment. Health and Safety Regulations necessitate that this is a compulsory process to be carried out on each site. These, together with site specific safety procedures will help to minimize the risk to accidents, personnel injury and loss of life. It is the responsibility of the employer to ensure that the work site is safe for all employees and that the safety procedures are followed by all employees.

SAFETY WHEN OPERATING AN AIR COMPRESSOR

- Do not bypass or disable the oil temperature and pressure sensors unless planning on running to failure (MEA does not recommend the practice).
- Do not expose the tank or compressor to extreme heat.
- Do not perform any service or repairs until the system has been completely relieved of air pressure.
- Maintenance and repairs on the system should only be done by qualified personnel.
- Do not operate the compressor while driving (vehicle mounted systems).
- Do not tamper with the pressure relief valve.
- Follow safe work practice, wear the appropriate personal protective equipment (PPE) when operating air-powered equipment, particularly eye and hearing protection.
- Avoid contact with rotating components, ensure all safety guards are in place.
- Avoid all contact with pressurized air. If it penetrates the skin, it can enter blood stream and cause death.
- Vaporized oil propelled by high pressure is an explosive mixture. To prevent compressor explosion or fire, make sure that the air entering the compressor is free of flammable vapours.
- Do not breathe the compressor air, vaporized oil is a respiratory hazard.
- Stay clear of all moving parts when the system is operating.
- Follow safety procedures for service operations as set by the authority.
- Run the system at idle speed and under no load conditions for 2 to 3 minutes before turning the system off to allow system cooling and lubrication to occur.

HYDRAULIC SAFETY

ALL HYDRAULIC EQUIPMENT MUST BE TREATED WITH EXTREME RESPECT AND CARE. AS THE WORKING FLUID IS UNDER EXTREME PRESSURE, UP TO 5000PSI, WITH HIGH FLOW RATES GENERATING HIGH HEAT, ALL APPROPRIATE SAFETY PRECAUTIONS MUST BE TAKEN IN TO ACCOUNT AND SAFETY EQUIPMENT MUST BE WORN IF IN CONTACT WITH THE EQUIPMENT UNDER OPERATION. ALL LEAKS, NO MATTER HOW MINOR, MUST BE RECTIFIED IMMEDIATELY AND ANY WEAR IN THE HOSES MUST BE ADDRESSED AND EQUIPMENT REPLACED. HYDRAULIC INJECTION IS DANGEROUS AND LIFE THREATENING AND EVEN A PINHOLE LEAK WILL BLANKET AN ENTIRE ENCLOSED SPACE VERY QUICKLY WITH HAZARDOUS VAPORISED HYDRAULIC OIL MIST.

2. INTRODUCTION

This MEA vehicle mounted air compressor system utilizes the available hydraulic power for the running of the installed compressor to supply compressed air at the specified flow rate and pressure.

Only those who have been properly trained and delegated to do so, and who have read and understand the operation and installation procedures should install MEA compressor systems.

This Manual contains vital information of the compressor system and its integration into the existing hydraulic system to ensure that it is operated in a safe and efficient manner.

The air is drawn via the intake filter, and then through the intake valve into the compression Chamber. In the compression chamber, the air is compressed, and oil is injected for lubrication and cooling. The oil-air mixture then enters the separating tank in which most of the oil is separated from the air. The air travels to the compressed air outlet via the air-oil separating element and the minimum pressure valve and ready to be utilized.

In the air-oil separating element, the oil is filtered out down to a residual content of < 3 mg/m3 and is then conveyed back into the compressor housing via a nozzle and the non-return valve. When the compressor module is switched off, the minimum pressure valve with a non-return function prevents backflow of the compressed air out of the system into the compression chamber. During start up a faster pressure build-up is also ensured, which is required for optimum lubrication and oil separation.

The heat resulting during compression is dissipated via the oil-air mixture. The oil circulation also results from the pressure difference between the outlet and inlet pressure. The optimum operating temperature for the oil is adjusted by the integrated oil thermostat Depending on the oil temperature, the oil thermostat valve routes the oil flow via the oil cooler or directly to the oil filter. The oil then flows via the oil filter to the various injection points in the compressor block.

3. SPECIFICATIONS

Compressor Model:	Packsmart V90		
Compressor Type:	Oil flooded rotary screw compressor		
Hydraulic Motor Type:	32cc Gear Motor		
Control:	24V/12V Electronic Control		
Maximum Air Delivery:	145cfm @ 150psi (Refer to flow table on Page 8)		
Oil Flow Requirements	Refer to table on Page 8		
Oil Pressure (Nominal): 180 Bar			
Pressure Regulation:	Mechanical Inlet control valve modulates flow in response to demand		
Safety Features:	200 PSI relief valve in compressor sump Temperature safety sensor in compressor Rapid blow-down valve to discharge system pressure on shutdown		
Lubrication:	MEA Certified and Approved Synthetic Oil		
Filters:	Paper-type replaceable air filter Spin-on type oil filter Coalescing separator element		

Document No 7231-D0001-01

5

4. OPERATING PROCEDURE

6

WARNING

CAREFULLY READ THE OPERATING INSTRUCTIONS BELOW. FAILURE TO ADHERE TO THE FOLLOWING COMPRESSOR OPERATING INSTRUCTION COULD RESULT IN SERIOUS INJURY.

- 1. Check Oil Level (refer to page 14)
- 2. Check Hoses and fittings for leaks. Make sure the hoses are not loosened nor damaged.
- 3. Check and make sure hydraulic supply/return/drain (if applicable) are installed correctly.
- 4. Check Air Filter for Blockage.
- 5. Check the Safety circuit switch operation (Reset Switch).
- 6. Switch on the vehicle and activate the vehicle flow control (turn PTO on).
- 7. Turn on the compressor either at the control box or in the cab and ensure it is in the unloaded state (check load/unload switch).
- 8. Turn on the unload/load switch to load and see if the compressor builds pressure to the regulated setting.
- 9. Plug an air tool into the air outlet and operate. Ensure that the compressor works as required.
- 10. When the work is finished, switch the compressor to unload.
- 11. Switch off at either the control box or in Cab and switch off the vehicle.
- 12. It is good practice to check for any visible signs of hydraulic fluid leakage and or compressor fluid leakage after each use.

5. INSTALLATION

The SMARTPACK 100H is designed as an integrated compressor system for connection to an existing hydraulic system. The SMARTPACK 100H only requires connection of a pressure line in, a return line out and a connection of the motor drain line (if applicable) to the tank.

WARNING(!) When setting the compressor unit up, ensure there is a safety mechanism in place to prevent any excessive flow or pressure into the compressor hydraulic circuit. MEA will not warrant any damage caused and will void warranty due to inadequate safety protection of the existing hydraulic system.

- 1. Install SMARTPACK 100H into position on the vehicle using 6 x min. M12 x 1.75 Grade 8.8 Fasteners.
- Install the hydraulic lines (i.e. pressure in, return out and drain line if applicable). For frameless version, pressure line (hydraulic oil inlet) will be marked "P" and return line (hydraulic oil outlet) will be marked "T" on the motor. For units with unloader valve, inlet and outlet ports are marked and easily identifiable on the valve body.
- 3. In installing a frameless version; install the cooler in place and connect the compressor cooler lines between the cooler and the compressor, see Page 16 for port identification.
- Connect the electrical control box to the vehicle; be sure to place an in-line weatherproof fuse (30A 12V and 20A – 24V) within 300mm of the vehicle battery. Ensure the control box is compatible with your vehicles voltage rating.
- 5. Connect the pressure gauge line to the SMARTPACK 100H, see circuit diagram (Page 20).
- 6. Connect the terminals of the electrical loom as per the circuit diagram (Page 16) relevant to your vehicle to both the vehicle and the SMARTPACK 100H.
- 7. Check the oil level in the compressor.
- 8. Switch on the vehicle, turn on the compressor at the control box and test the hydraulic solenoid for operation.
- 9. Turn the unload/load switch to load and check the compressor builds pressure to the regulated pressure setting.
- 10. Plug an air tool into the air outlet and operate checking that the compressor works as required, run for 10mins.
- 11. Unload the compressor, switch off the control box, switch off the vehicle and check for any visible signs of hydraulic fluid leakage.
- 12. When the compressor has cooled down (safe to touch), re-check the compressor oil level.

6. SCHEDULE MAINTENANCE

Interval	Compressor
	ACTION TO BE TAKEN
Periodically During Operation	Observe all gauge readings. Note any change from the normal readings and determine the cause. Have the necessary repairs made.
	(Note: "Normal" is the usual gauge reading when operating at similar conditions on a day to day basis.)
	Inspect and replace spin-on coalescing element if necessary.
Periodically or as required	Inspect and clean oil cooler fins.
	Check system for oil and/or air leaks.
	Check the compressor oil level.
Every 10 Hours or Daily	Check air filter/s and connecting hose and clamps.
	Check for oil and air system, including hoses, for leaks.
Every 25 Hours or Monthly	Drain water from tank and check Compressor oil level.
	Check system for oil and/or air leaks.
After first 50 hours of operation	Check engine/compressor mounts fastener torque.
	Check belt and pulleys for signs of wear - note that belt normally gives off blue particles until It runs in.
	Check compressor oil level.
Every 100 Hours	Clean air cleaner element.
Every roo riouis	Check engine/compressor/generator mounts for excessive wear and fastener torque.
	Change compressor oil approx. 7L.
Event 400 Hours of energies and	Change compressor oil filter.
Every 400 Hours of operation or 9 months (See Service Kit List)	Change compressor air filter.
	Check belt and pulleys for signs of wear.
	Check valve clearance.
800 Hours / 18 months	Change compressor coalescing filter.

7. TROUBLESHOOTING

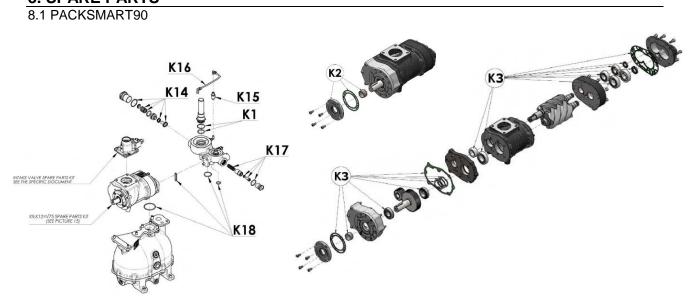

SYMTOMS	PROBABLE CAUSE	CORRECTIVE ACTION
	1-The intake valve remains closed.	1-Check the valve. If necessary, replace the damaged parts with the spare parts kit.
The compressor does not load.	2-The solenoid valve does not work accurately	2-Check the solenoid valve. If necessary, replace it.
	3-Losses on the pressure line.	3-Check pipes and cables. If necessary, replace them.
During idling phase, the compressor does not	1-The solenoid valve does not work accurately.	1-Check the solenoid valve. If necessary, replace it.
discharge pressure from separator tank	2-The calibrated nozzle is clogged.	2-Remove the calibrated nozzle. Clean or replace it.
Compressor consolity or	1-The air filter is clogged.	1-Remove the air filter. Clean or replace it.
Compressor capacity or pressure lower than usual standard.	2-The intake valve does not open.	2-Check the valve. If necessary, replace the damaged parts with the spare parts kit.
Standard.	3-Air loss from safety valve.	3-Replace the valve.
Compressor keeps on loading over working	1-The solenoid valve does not work accurately.	1-Check the solenoid valve. If necessary, replace it.
pressure: safety valve opens	2-Clogged separator filter.	2-Replace the separator filter.
	1-Insufficient cooling.	1-Check the cooling system. Check coolant level on tank.
	2-Dirty oil	2-Replace it with new oil.
	3-Oil level is too low.	3-Check coolant level on tank and if necessary, add oil .
Compressor overheating.	4-Clogged-up cooler or pipe connection	4-Clean cooler and pipes.
	5-The thermostatic valve does not work correctly.	5-Check the thermostatic valve. If necessary, replace the damaged parts with K17 spare parts kit (Contact MEA for parts required)
		6-Clogged oil filter
During unloading phase, pressure increases up to	1-The intake valve remains open.	1-Check the valve. If necessary, replace the damaged parts with spare parts kit.
safety valve opening	2-The calibrated nozzle is clogged.	2-Remove the calibrated nozzle. Clean or replace it.
Oil leakage from intake	1-The intake valve does not work properly (does not close)	1-Check the valve. If necessary, replace the damaged parts with K9 spare parts kit.
valve only when the machine is switched off: oil soaked-up air filter	2-The no-return valve of intake valve does not work correctly.	2-Check it and clean it.
	1-Too high level of oil in the tank	1-Check oil level on separator tank.
Oil soaked-up air filter during	2- Clogged separator filter	2- Replace the separator filter.
unloading phase	3-The recovery oil viewer is dirty or does	3 -Clean it or if necessary, replace the damaged
ameading pridee	not work	parts with K15 spare parts kit.
<u> </u>	appropriately.	If separator filter is clogged up, replace it.
The compressor remains under loading phase.	1-The intake valve does not work properly (does not close)	1-Check the valve. If necessary, replace the damaged parts with spare parts kit.
under loading phase.	1-Unknown particles inside.	1-Call MEA technical support.
Rotor seizure	2-Insufficient lubrication.	2-Call MEA technical support.
	1-Separator filter damaged.	1-Replace the separator filter.
Presence of oil in the outlet of minimum pressure valve	2-Oil recovery viewer obstructed.	2-Clean the oil recovery viewer.

10. WARRANTY

1 GENERAL PROVISIONS AND LIMITATIONS

1.1 Mobile Energy Australia (hereafter "MEA") warrants to each original retail purchaser (hereafter "Buyer") that such product(s) are, at the time of delivery to the buyer, free of manufacture ring defects in material and workmanship.

2 NO WARRANTIES IS MADE WITH RESPECT TO

- 2.1 Any product(s) which in the judgment of MEA has been subject to negligence, accident, improper storage, improper installation, improper application, improper operation or maintenance or has been repaired or altered by others without the written authority of MEA.
- 2.2 Components or accessories manufactured, warranted and serviced by others.
- 2.3 Damages caused by the lack of normal maintenance, service and repairs such as the replacement and service of filters and seals.
- 2.4 Damages caused by the lack of normal minimum action, such as adjustments and inspections, replacement of items, such as service filters, seals and service kits.
- 2.5 Consequential damages caused by product(s) failure.
- 2.6 Any product(s) if other than MEA's genuine components are used in the product(s).
- 2.7 Normal wear and tear of product(s).

3 WARRANTY PERIOD

- 3.1 The warranty period will commence upon installation of the product(s). The returned registration form marks the date of installation. If the registration form is not received, the warranty period will be deemed to commence 30 days from date of shipment from MEA.
- 3.2 The Product(s) is warranted against manufacturer defects in materials and workmanship for a period of 12 months.
- 3.3 The compressor air end is warranted to be free from defects in material and workmanship for a period of two (2) years from the date of installation.
- 3.4 Components supplied under warranty shall be warranted for the remainder of the original warranty period.
- 3.5 MEA factory rebuilt components shall be warranted for a period of 6 months from date of shipment.

4 MEA OBLIGATIONS

- 4.1 The obligation of MEA is limited to repairing or replacing parts, during normal business hours, at an authorized service facility, any component, that in the judgment of MEA are defective.
- 4.2 The obligation of MEA is limited to replacement of faulty parts. No liability is accepted for any freight costs, consequential damages, injuries or expenses directly or indirectly related to the Product(s) failure.

Document No 7231-D0001-01

Mobile Energy Australia Pty Ltd P: +61 7 3273 6803

WARRANTY (continued)

5 BUYER OBLIGATIONS

- 5.1 Buyer shall notify MEA of the alleged defect within 10 days of initial discovery and return the allegedly defective component(s) within 30 days of initial discovery.
- 5.2 The Buyer must prepay all costs associated with the warranty.
- 5.3 The Buyer must return components claimed under this warranty to a facility designated by MEA for evaluation, to establish a claim under this warranty.
- 5.4 Buyer shall maintain and service MEA Product(s) in accordance with the MEA Product(s) Owner's

6 WARRANTY REGISTRATION VALIDATION

6.1 A registration form is provided to the Buyer with the product(s). The form must be fully completed by the Buyer and returned to MEA upon completion of the installation of the product(s) in order to validate the warranty. No warranty claims will be processed unless MEA has received a fully completed warranty registration form.

7 DISCLAIMER AND WARRANTY SERVICE

- 7.1 Any labour costs claimed in excess of MEA's set rate and/or times are not provided by this warranty. If applicable, any labour costs in excess of MEA rate schedules caused by, but not limited to, location or inaccessibility of the equipment, travel time or labour provided by unauthorized service personnel are not provided by this warranty.
- 7.2 This warranty is in lieu of all other warranties or obligations expressed or implied. MEA expressly disclaims all implied warranties of merchantability or fitness for a purpose.
- 7.3 Warranty claims must be pre-authorized by MEA, and the components returned via prepaid freight using the designated "Returned Merchandise Authorization" number and form.

PLEASE NOTE:

Both the MEA Product Registration Form and the Kubota Engine Warranty Registration Form MUST be returned to MEA in the stamped, self-addressed envelope.

WARNING!!!

Failure to return PRODUCT WARRANTY REGISTRATION FORMS detailed above may result in the delayed processing of warranty claims.
